SUMMARY

Data Analyst with hands-on experience in Python (Pandas, NumPy), SQL, and Tableau and data visualization, complemented by six months of training at DIPAS-DRDO supporting confidential research through data analysis, annotation, visualization. Developed end-to-end analytics and AI projects across entertainment, climate, and environmental datasets involving computer vision, machine learning, ETL, predictive analytics, and interactive dashboards. Proficient in transforming raw data into insights through data cleaning, exploratory analysis, visualization and model development, with a strong foundation in solving real-world analytical problems.

EXPERIENCE

Trainee, DIPAS-DRDO

Jan '26 – Jun '26

- Conducted data analysis and preprocessing on confidential research datasets.
- Developed visualizations to communicate insights to research teams.
- Performed data annotation and validation for AI/ML workflows.
- Supported dataset quality assurance and documentation.
- Worked in a multidisciplinary research environment following organizational security and compliance.

Tools: Excel, SQL, Tableau, NumPy, Python, Pandas

EDUCATION

Bachelor of Technology (B.Tech.) in Artificial Intelligence and data science

Galgotias University, Uttar Pradesh | 2026

CGPA: 7.71

Class XII (Senior Secondary)

Mother's Global School, Delhi | 2021

Board: CBSE

Percentage: 85

Class X (Secondary)

Mother's Global School, Delhi | 2019

Board: CBSE

Percentage: 83

SKILLS

Programming and Analytics: Python, SQL, Pandas, NumPy, Matplotlib, Statistical Analysis, ETL / Data Cleaning, Time-Series Analysis

Visualization and BI: Tableau, Excel (Pivot Tables, VLOOKUP), Google Sheets, Dashboard Reporting, Business Intelligence

Tools: Visual Studio, Anaconda, Jupyter Notebook, Streamlit

Soft Skills: Analytical Thinking, Data Storytelling, Stakeholder Communication, Cross-Functional Collaboration, Problem-Solving, Time Management

PROJECTS

FaceGuard: AI-Based Attendance System | [GitHub](#)

- Developed a real-time biometric attendance system using Python, OpenCV and DeepFace(FaceNet) for automated facial recognition and attendance management.
- Implemented multi-layered anti-spoofing pipeline combining MiniFASNet, LBP texture analysis, FFT-based frequency analysis, and geometric validation to strengthen authentication against presentation attacks.
- Built a Streamlit based admin dashboard supporting employee enrolment, attendance monitoring, analytics, duplicate identity detection, and security event logging.
- Designed a modular architecture integrating facial recognition, attendance management and lightweight CSV-based data storage for scalable deployment.

Technologies Used: Python, Facenet (DeepFace), Streamlit. Pandas, OpenCV

Process Status Monitoring and Prediction System | [GitHub](#)

- Developed a real-time process monitoring system using Python and OpenCV to detect operational states through HSV-based color recognition from webcam input.
- Engineered feature extraction pipelines from historical process-state data and implemented ensemble ML models (Random Forest and Linear Regression) to predict state durations and forecast upcoming process transitions.
- Built automated data analysis and visualization modules using Pandas, NumPy, and Matplotlib to generate operational reports, transition trends and performance insights.
- Designed a modular architecture supporting live monitoring, historical state tracking, confidence-based predictions, and automatic JSON data logging.

Technologies Used: Python, Pandas, NumPy, OpenCV, Matplotlib. Scikit-learn

Netflix Content Case Study | Python, Pandas, Tableau | [GitHub](#)

- Cleaned and normalised a 2,000+ row dataset in Pandas, handling missing values and format inconsistencies, before querying content attributes (type, release season, language, release day) using SQL to surface viewership patterns.
- Found that English-language drama content released on Fridays in Q4 accounted for the highest engagement windows; recommended front-loading drama releases in Nov–Dec as a content strategy insight for stakeholders.
- Built an interactive Tableau dashboard visualising content performance by genre, language, and release timing, translating analysis into a structured narrative for cross-functional review.

Carbon Emissions Worldwide: Case Study | Python, Pandas, Matplotlib | [GitHub](#)

- Ingested and cleaned datasets covering annual surface temperature changes (1960–2022) and monthly atmospheric CO₂ concentrations (1958–2024), performing time-series analysis to identify long-term emission trends.
- Simulated emission outcomes under three policy scenarios using statistical modelling, producing dashboards to support long-term environmental planning decisions.

Rainfall Trends in India Analysis with Python | Python, Pandas, Seaborn | [GitHub](#)

- Cleaned and analyzed 115 years of India rainfall data (1901–2015) using Pandas and Seaborn, detecting seasonal anomalies and building time-series trend models across monthly, seasonal, and annual granularity.
- Delivered visual dashboards identifying critical drought-prone regions and translating findings into forecasting recommendations for agriculture and water resource management stakeholders.

CERTIFICATIONS

Database with SQL, Oracle

Celonis Certified, Celonis

Blue Prism Associate Developer, SS&C
