

ARYAN DATLA

Delhi, India | 8851511717 | aryandatla2003@gmail.com | [LinkedIn](#) | [GitHub](#)

SUMMARY

Junior Data Analyst with hands-on experience in Python (Pandas, NumPy), SQL, and Tableau. Built end-to-end analytics projects across entertainment, climate, and environmental datasets — including a Netflix content case study that identified peak-engagement content windows, and a carbon emissions trend model simulating future policy scenarios. Proficient in data cleaning, ETL pipelines, time-series analysis, and stakeholder-ready dashboard reporting. Comfortable with the full pipeline from raw data to visual insight.

EXPERIENCE

Trainee, DIPAS-DRDO

Jan '26 – Jun '26

FaceGuard: AI-Based Attendance System | [GitHub](#)

- Engineered a real-time face detection and recognition pipeline using Python and DeepFace (FaceNet), achieving 87% recognition accuracy across a 2,000-image test dataset through iterative model tuning and image-preprocessing optimisation.
- Built and validated facial authentication modules for secure identity verification, reducing manual review overhead by ~30% by automating identity checks via a Streamlit-based monitoring dashboard.
- Optimised OpenCV image-processing workflows through ETL pipeline restructuring, improving detection throughput by ~40% and cutting per-frame processing latency to support real-time performance requirements.

Technologies Used: Python, Facenet (DeepFace), Streamlit

Process Status Monitoring and Prediction System | [GitHub](#)

- Designed an end-to-end data pipeline in Python (Pandas, NumPy) to ingest, clean, and analyse 50,000+ operational log records, enabling real-time process status monitoring and time-series forecasting for a research team at DRDO.
- Developed ML-based anomaly detection models for operational trend analysis, achieving 90%+ precision in flagging abnormal process states across a 50,000-record dataset — a key business intelligence input for research evaluation decisions.
- Delivered a Matplotlib reporting dashboard summarising operational KPIs and anomaly trends, translating model outputs into visual findings for cross-functional research stakeholders to support data-driven evaluation of system behaviour.

Technologies Used: Python, Pandas, NumPy, OpenCV, Data Analysis, Matplotlib

EDUCATION

Bachelor of Technology (B.Tech.) in Artificial Intelligence and data science

Galgotias University, Uttar Pradesh | 2026

CGPA: 7.71

Class XII (Senior Secondary)

Mother's Global School, Delhi | 2021

Board: CBSE

Percentage: 85

Class X (Secondary)

Mother's Global School, Delhi | 2019

Board: CBSE

Percentage: 83

SKILLS

Programming and Analytics: Python, SQL, Pandas, NumPy, Matplotlib, Statistical Analysis, ETL / Data Cleaning, Time-Series Analysis

Visualization and BI: Tableau, Power BI, Excel (Pivot Tables, VLOOKUP), Google Sheets, Dashboard Reporting, Business Intelligence

Tools: Visual Studio, Anaconda, Jupyter Notebook, Streamlit

Soft Skills: Analytical Thinking, Data Storytelling, Stakeholder Communication, Cross-Functional Collaboration, Problem-Solving, Time Management

PROJECTS

Netflix Content Case Study | Python, Pandas, Tableau | [GitHub](#)

- Cleaned and normalised a 2,000+ row dataset in Pandas, handling missing values and format inconsistencies, before querying content attributes (type, release season, language, release day) using SQL to surface viewership patterns.
- Found that English-language drama content released on Fridays in Q4 accounted for the highest engagement windows; recommended front-loading drama releases in Nov–Dec as a content strategy insight for stakeholders.
- Built an interactive Tableau dashboard visualising content performance by genre, language, and release timing, translating analysis into a structured narrative for cross-functional review.

Carbon Emissions Worldwide: Case Study | Python, Pandas, Matplotlib | [GitHub](#)

- Ingested and cleaned datasets covering annual surface temperature changes (1960–2022) and monthly atmospheric CO₂ concentrations (1958–2024), performing time-series analysis to identify long-term emission trends.
- Simulated emission outcomes under three policy scenarios using statistical modelling, producing dashboards to support long-term environmental planning decisions.
-

Rainfall Trends in India Analysis with Python | Python, Pandas, Seaborn | [GitHub](#)

- Cleaned and analysed 115 years of India rainfall data (1901–2015) using Pandas and Seaborn, detecting seasonal anomalies and building time-series trend models across monthly, seasonal, and annual granularity.
- Delivered visual dashboards identifying critical drought-prone regions and translating findings into forecasting recommendations for agriculture and water resource management stakeholders.

CERTIFICATIONS

AWS Academy Graduate – Cloud Foundations, AWS

Database with SQL, Oracle

Celonis Certified, Celonis

Blue Prism Associate Developer, SS&C
